TEST SUMMARY REPORT

Project: E-Commerce Web Application Testing (nopCommerce Demo Store)

Test Type: Manual Functional Testing

Project Month: December 2025 – January 2026

1. Report Identifier

Test Summary Report – Manual Testing of nopCommerce Demo E-Commerce Application

2. Test Objective

The objective of this testing activity was to validate the functional behavior, usability, and basic user flows of the nopCommerce demo e-commerce application.

The focus was to ensure that core user functionalities work as expected and to identify potential defects that could impact user experience.

3. Scope of Testing

In-Scope Modules:

- User Registration
- User Login
- Product Search
- Product Details Page
- Shopping Cart
- Checkout
- Order Confirmation
- User Account
- Wishlist

Out-of-Scope:

- Admin panel testing
- Performance and load testing
- Security testing
- Automation testing

4. Test Environment

- Application Type: Web Application
- Browser: Google Chrome
- Environment: Desktop
- Network: Active Internet Connection

5. Test Execution Summary

- Test Scenarios Designed: 28
- Test Cases Designed & Executed: 50+
- Testing Type Performed:
    - Functional Testing
    - Regression Testing (basic)
    - Negative Testing
    - Usability Testing

All planned test cases were executed successfully, and observations were documented accordingly.

6. Defect Summary

A total of **6 defects** were identified and logged during the testing phase.

SEVERITY	COUNT
Critical	1
Major	2
Minor	3

Defect Areas Identified:

- Cart pricing updates
- Login validation handling
- Checkout payment validation
- Registration password validation

- Product search usability
- Wishlist user feedback

All defects were documented with clear reproduction steps, expected results, actual results, severity, and priority.

7. Risks & Limitations

- Testing was performed on a demo application with limited control over backend data
- Payment flow testing was restricted due to demo environment limitations
- Real-time production defects could not be validated

8. Overall Test Conclusion

- The nopCommerce demo e-commerce application was found to be **functionally stable** for core user operations.

- Most identified issues were related to validation handling and user experience improvements.
- The application is suitable for usage with recommended fixes applied to the identified defects to enhance usability and reliability.

Skills Demonstrated

- Test Scenario Design
- Test Case Writing
- Defect Identification & Reporting
- Functional & Negative Testing
- QA Documentation
- Analytical Thinking
